NA556, NE556, SA556, SE556
DUAL PRECISION TIMERS

SLFS023G – APRIL 1978 – REVISED JUNE 2006

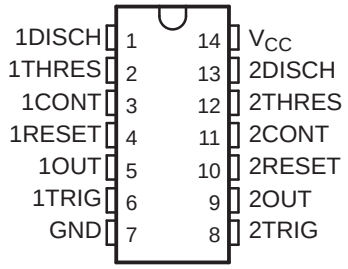
FEATURES

- **Two Precision Timing Circuits Per Package**
- **Astable or Monostable Operation**
- **TTL-Compatible Output Can Sink or Source up to 150 mA**
- **Active Pullup or Pulldown**
- **Designed to Be Interchangeable With Signetics NE556, SA556, and SE556**

APPLICATIONS

- **Precision Timers From Microseconds to Hours**
- **Pulse-Shaping Circuits**
- **Missing-Pulse Detectors**
- **Tone-Burst Generators**
- **Pulse-Width Modulators**
- **Pulse-Position Modulators**
- **Sequential Timers**
- **Pulse Generators**
- **Frequency Dividers**
- **Application Timers**
- **Industrial Controls**
- **Touch-Tone Encoders**

NA556...D OR N PACKAGE
NE556...D, N, OR NS PACKAGE
SA556...D OR N PACKAGE
SE556...J PACKAGE
(TOP VIEW)



DESCRIPTION/ORDERING INFORMATION

These devices provide two independent timing circuits of the NA555, NE555, SA555, or SE555 type in each package. These circuits can be operated in the astable or the monostable mode with external resistor-capacitor (RC) timing control. The basic timing provided by the RC time constant can be controlled actively by modulating the bias of the control-voltage input.

The threshold (THRES) and trigger (TRIG) levels normally are two-thirds and one-third, respectively, of V_{CC}. These levels can be altered by using the control voltage (CONT) terminal. When the trigger input falls below trigger level, the flip-flop is set and the output goes high. If the trigger input is above the trigger level and the threshold input is above the threshold level, the flip-flop is reset, and the output is low. The reset (RESET) input can override all other inputs and can be used to initiate a new timing cycle. When RESET goes low, the flip-flop is reset and the output goes low. When the output is low, a low-impedance path is provided between the discharge (DISCH) terminal and ground (GND).

ORDERING INFORMATION

T_A	V_T (MAX) V_{CC} = 15 V	PACKAGE(1)		ORDERABLE PART NUMBER	TOP-SIDE MARKING
0°C to 70°C	11.2 V	PDIP – N	Tube of 25	NE556N	NE556N
		SOIC – D	Tube of 50	NE556D	NE556
			Reel of 2500	NE556DR	
		SOP – NS	Reel of 2000	NE556NSR	NE556
–40°C to 85°C	11.2 V	PDIP – N	Tube of 25	SA556N	SA556N
–40°C to 105°C	11.2 V	PDIP – N	Tube of 25	NA556N	NA556N
		SOIC – D	Tube of 50	NA556D	NA556
			Reel of 2500	NA556DR	
–55°C to 125°C	10.6 V	CDIP – J	Tube of 25	SE556J	SE556J
				SE556JB	SE556JB

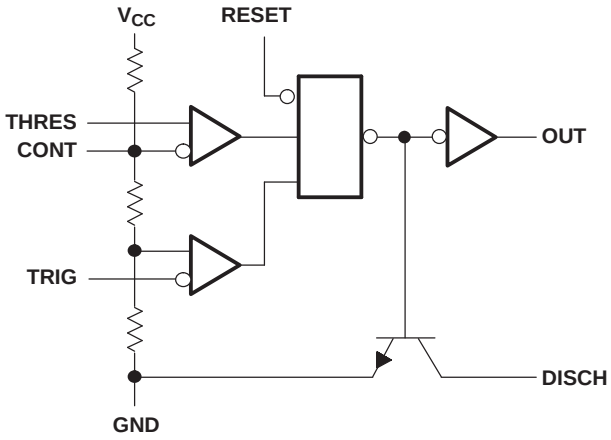
(1) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

FUNCTION TABLE (each timer)

RESET	TRIGGER VOLTAGE(1)	THRESHOLD VOLTAGE(1)	OUTPUT	DISCHARGE SWITCH
Low	Irrelevant	Irrelevant	Low	On
High	<1/3 V_{DD}	Irrelevant	High	Off
High	>1/3 V_{DD}	>2/3 V_{DD}	Low	On
High	>1/3 V_{DD}	<2/3 V_{DD}	As previously established	

(1) Voltage levels shown are nominal.

FUNCTIONAL BLOCK DIAGRAM, EACH TIMER



RESET can override TRIG, which can override THRES.

Absolute Maximum Ratings(1)

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V_{CC}	Supply voltage(2)			18	V
V_I	Input voltage	CONT, RESET, THRES, and TRIG		V_{CC}	V
I_O	Output current			±225	mA
θ_{JA}	Package thermal impedance(3)(4)	D package		86	°C/W
		N package		80	
		NS package		76	
θ_{JC}	Package thermal impedance(5)(6)	J package		15.05	°C/W
T_J	Operating virtual junction temperature			150	°C
	Lead temperature 1,6 mm (1/16 in) from case for 60 s	J package		300	°C
	Lead temperature 1,6 mm (1/16 in) from case for 10 s	D, N, or NS package		260	°C
T_{stg}	Storage temperature range		–65	150	°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values are with respect to network ground terminal.
(3) Maximum power dissipation is a function of $T_J(max)$, θ_{JA}, and T_A. The maximum allowable power dissipation at any allowable ambient temperature is $P_D = (T_J(max) – T_A)/\theta_{JA}$. Operating at the absolute maximum T_J of 150°C can affect reliability.
(4) The package thermal impedance is calculated in accordance with JESD 51-7.
(5) Maximum power dissipation is a function of $T_J(max)$, θ_{JC}, and T_C. The maximum allowable power dissipation at any allowable case temperature is $P_D = (T_J(max) – T_C)/\theta_{JC}$. Operating at the absolute maximum T_J of 150°C can affect reliability.
(6) The package thermal impedance is calculated in accordance with MIL-STD-883.

Recommended Operating Conditions

			MIN	MAX	UNIT
V_{CC}	Supply voltage	NA556, NE556, SA556	4.5	16	V
		SE556	4.5	18	
V_I	Input voltage	CONT, RESET, THRES, and TRIG		V_{CC}	V
I_O	Output current			±200	mA
T_A	Operating free-air temperature	NA556	–40	105	°C
		NE556	0	70	
		SA556	–40	85	
		SE556	–55	125	

Electrical Characteristics

V_{CC} = 5 V to 15 V, T_A = 25°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS		NA556 NE556 SA556			SE556			UNIT
				MIN	TYP	MAX	MIN	TYP	MAX

V_{CONT}	Control voltage (open circuit)	V_{CC} = 15 V		9	10	11	9.6	10	10.4	V
			T_A = –55°C to 125°C				9.6		10.4	
		V_{CC} = 5 V		2.6	3.3	4	2.9	3.3	3.8	
			T_A = –55°C to 125°C				2.9		3.8	
V_{OL}	Low-level output voltage	V_{CC} = 15 V, I_{OL} = 10 mA			0.1	0.25		0.1	0.15	V
			T_A = –55°C to 125°C						0.2	
		V_{CC} = 15 V, I_{OL} = 50 mA			0.4	0.75		0.4	0.5	
			T_A = –55°C to 125°C						1	
		V_{CC} = 15 V, I_{OL} = 100 mA			2	2.5		2	2.2	
			T_A = –55°C to 125°C						2.7	
		V_{CC} = 15 V, I_{OL} = 200 mA			2.5			2.5		
		V_{CC} = 5 V, I_{OL} = 3.5 mA	T_A = –55°C to 125°C						0.35	
		V_{CC} = 5 V, I_{OL} = 5 mA			0.1	0.25		0.1	0.15	
			T_A = –55°C to 125°C						0.8	
		V_{CC} = 5 V, I_{OL} = 8 mA			0.15	0.3		0.15	0.25	
V_{OH}	High-level output voltage	V_{CC} = 15 V, I_{OH} = –100 mA		12.75	13.3		13	13.3		V
			T_A = –55°C to 125°C				12			
		V_{CC} = 15 V, I_{OH} = –200 mA			12.5			12.5		
		V_{CC} = 5 V, I_{OH} = –100 mA		2.75	3.3		3	3.3		
			T_A = –55°C to 125°C				2			
I_{CC}	Supply current	Output low, No load	V_{CC} = 15 V		20	30		20	24	mA
			V_{CC} = 5 V		6	12		6	10	
		Output high, No load	V_{CC} = 15 V		18	26		18	20	
			V_{CC} = 5 V		4	10		4	8	

(1) This parameter influences the maximum value of the timing resistors R and R_B in the circuit of Figure 1. For example, when V_{CC} = 5 V, the maximum value is R = R_A + R_B ≈ 3.4 MΩ, and for V_{CC} = 15 V, the maximum value is ≈ 10 MΩ.

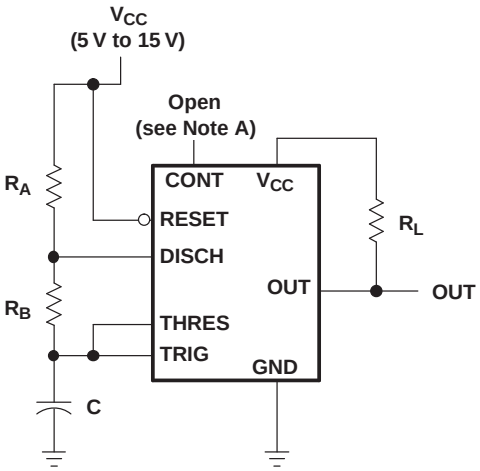
Operating Characteristics

V_{CC} = 5 V and 15 V

PARAMETER		TEST CONDITIONS(1)	NA556 NE556 SA556			SE556			UNIT
			MIN	TYP	MAX	MIN	TYP	MAX	
Initial error of timing interval(2)	Each timer, monostable(3)	T_A = 25°C		1	3		0.5	1.5(4)	
	Each timer, astable(5)			2.25%			1.5%		
	Timer 1 – Timer 2			±1			±0.5		
Temperature coefficient of timing interval	Each timer, monostable(3)	T_A = MIN to MAX		50			30	100(4)	ppm/°C
	Each timer, astable(5)			150			90		
	Timer 1 – Timer 2			±10			±10		
Supply voltage sensitivity of timing interval	Each timer, monostable(3)	T_A = 25°C		0.1	0.5		0.05	0.2(4)	%/V
	Each timer, astable(5)			0.3			0.15		
	Timer 1 – Timer 2			±0.2			±0.1		
Output-pulse rise time		C_L = 15 pF, T_A = 25°C		100	300		100	200(4)	ns
Output-pulse fall time		C_L = 15 pF, T_A = 25°C		100	300		100	200(4)	ns

(1) For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions.
(2) Timing-interval error is defined as the difference between the measured value and the average value of a random sample from each process run.
(3) Values specified are for a device in a monostable circuit similar to Figure 2, with the following component values: R_A = 2 kΩ to 100 kΩ, C = 0.1 µF.
(4) On products compliant to MIL-PRF-38535, this parameter is not production tested.
(5) Values specified are for a device in an astable circuit similar to Figure 1, with the following component values: R_A = 1 kΩ to 100 kΩ, C = 0.1 µF.

APPLICATION INFORMATION



NOTE A: Bypassing the control-voltage input to ground with a capacitor might improve operation. This should be evaluated for individual applications.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

NOTES: A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Body dimensions do not include mold flash or protrusion not to exceed 0,15.
D. Falls within JEDEC MO-150

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
